

GRP Chemical Resistance

Material Characteristics

SLIP RESISTANT

QuartzGrip™ moulded fibreglass grating has an integral, angular quartz gritted surface tested in accordance with BS7976-2. It provides an exceptional level of slip resistance in all directions. Lifespan depends on frequency of use.

CHEMICAL RESISTANT

GRP is resistant to a wide range of chemicals, across a wide temperature spectrum. It can also be made using different resin systems to achieve specific chemical resistance properties.

FIRE RESISTANT

All products contain a fire-resistant additive and comply with **Euro Class 1** and **ISO 11925-2**. Performance is equivalent to **ASTM E84 class A** and **BS EN 13501-1 Class Bfl-s1**.

QUALITY ASSURED

Manufactured in accordance with our **ISO 9001** accredited Quality Management System, the structural integrity of the material is high grade. A suggested lifespan of **25 years** can be expected, based on a number of variables: environmental, installation process, maintenance, loading and traffic conditions.

LIGHTWEIGHT & DURABLE

Weighing a fraction of the steel equivalents, GRP is lightweight in comparison and can be maneuvered without mechanical assistance. It's exceptionally durable and has the ability to withstand impact, reducing the risk of permanent buckling or deformation.

SELF-COLOURED

All QuartzGrip™ moulded fibreglass grating and GRP Profiles are pigmented throughout during manufacture and do not require any secondary treatment such as powder coating or paint spraying. There are a range of standard stock colours (below); bespoke colours are available upon request.

UV STABLE

All products are manufactured with a high-quality UV inhibitor to prevent colour degradation.

ECONOMICAL

In most cases, GRP equivalents to steel components are much cheaper to buy. Add to that the reduction in handling and maintenance costs and GRP is the smart choice
